

AnMed Health Introduces New Germ-fighting UV Disinfection Systems

AnMed Health is introducing a new pair of UV disinfection systems to further its infection prevention efforts. AnMed Health is proud to announce it has purchased two Rapid Disinfectors™ UV Disinfection Systems from Rochester, NY-based Steriliz, LLC. AnMed Health's Environmental Services team will use the Rapid Disinfectors™ systems to further disinfect many areas in its facilities.

The Steriliz Rapid Disinfectors™ systems use UV-C bulbs to deliver measured doses of light strong enough to eradicate potentially harmful viruses, bacteria, spores, and fungi often present in hospitals. The Rapid Disinfectors™ systems are the only UV-C systems with the ability to Measure, Record, and Report the actual dose of light delivered, giving its customers reduced disinfection times, real-time assurance of proper UV doses, and a comprehensive reporting program.

AnMed Health was one of the first hospitals in South Carolina to use UV for disinfection, and they remain committed to using UV disinfection to improve patient safety in its facilities. "We are very excited to begin using the Rapid Disinfectors™ UV-C systems," says Sonny Wyatt, Director of Environmental Services at AnMed Health. "We purchased other UV-C systems in the past and are switching to the Rapid Disinfectors™ systems because they are the only ones that Measure, Record, and Report the actual UV-C dose delivered. Measuring the UV-C doses will give us a higher level of confidence we are protecting our patients in every way possible."

AnMed Health is South Carolina's largest independent, not-for-profit health system. AnMed Health's anchor facility is the AnMed Health Medical Center, a 461-bed acute care hospital in Anderson, South Carolina. Services provided at the Medical Center include open heart surgery, vascular surgery, general surgery, bariatric surgery, emergency/trauma medicine, a stroke/neurological center, and diagnostic MRI, CT and laboratory medicine. Other facilities located at AnMed Health's medical center campus include Pediatric Therapy Works, a speech,

occupational and physical therapy program for children; and CareConnect, a walk-in facility that treats non-life-threatening ailments such as influenza, broken bones and minor nosebleeds.

Steriliz, LLC is a leading manufacturer of UV disinfection technology, with Headquarters in Rochester, NY and offices in Franklin, TN. Steriliz, LLC manufactures the Rapid Disinfector UV-C Disinfection Systems used to eradicate potentially harmful pathogens in hospitals, long-term care facilities, and other environments with dangerous pathogens. The Rapid Disinfector is the only UV-C disinfection system available with the ability to Measure, Record, and Report the actual UV-C doses delivered.
